

Menu directed inspection comparison chart

M Menu Directed Inspection (MDI)

Built for the Waygate Technologies VideoProbe™ portfolio, Menu Directed Inspection (MDI) software enables users to create templates for common inspections to decrease inspection time and provide more reliable and consistent inspection data. The MDI template will provide guidance through the inspection process, intelligently naming and tagging files so that with a click of a button, an inspection report is automatically created. This powerful tool enables faster inspections and increases inspector productivity so there is less time spent after the inspection organizing, naming, and arranging images for an inspection report.

MDI highlights on Mentor VideoProbes

- Preview reports right on the borescope before finalizing
- Load up to 50 different MDI templates
- Choose from up to 8 different report page layout options
- Generate reports in both PDF and MS Word format
- View reference material in PDF, JPG, and BMP format
- Upload inspection data and report to InspectionWorks Insight secure cloud application
- Merge two or more MDI inspections into one inspection on-device
