# Inspections Made Simple

for Engine Manufacturers

InspectionWorks is a nondestructive testing (NDT) software platform designed to simplify and standardize aircraft maintenance inspections, without sacrificing quality. It streamlines inspection processes, standardizes reports, improves collaboration across key stakeholders, and much more.

And the best part is, it seamlessly integrates with MViQ(+) and Mentor Flex borescopes.

Standardize your Inspections
Borescope inspection templates ensure that all inspections are done on your engines the way you want them, every time.

Collaborate with Key Stakeholders
Collaborate with asset owners and service providers to reduce downtime and extend the life of engines.

Collect Insights about Assets
Capture detailed information about your engines over time to make more informed decisions.

Centralize your Inspection Data
Bring all the inspection data about your engines into one unified platform. Use advanced search to view information and trends over time.

How it Works

Start with an MDI
Create and distribute Menu Directed Inspection (MDI) templates for asset owners and service providers.

Inspection Begins
Inspectors will capture and analyze inspection data, then upload to InspectionWorks.

Store, Search, Measure & Share
All inspection data is at your fingertips. Collaborate and share with key stakeholders.
