FORSA SCW80178 scale inhibitor

Control mineral scale formation in oilfield systems

Applications

- Offshore
- Onshore
- Continuous treatment

Features and Benefits

- Effective for most types of scale control
  - Provide versatility under changing conditions
  - Thermally stable to high temperatures

FORSA™ SCW80178 scale inhibitor, from Baker Hughes, is a polymer-based scale inhibitor and is especially recommended for control of calcium carbonate deposition.

FORSA SCW80178 scale inhibitor mitigates scale formation by functioning as a crystal modifier.

FORSA SCW80178 scale inhibitor is effective in fresh water and brines. For continuous injection, the usage concentration will typically vary from 2 to 35 ppm depending on the severity of the scaling condition.

Typical properties	
Relative density 40˚F (15.6˚C)	1.1 to 1.17
Melting point/ freezing point	<37.4˚F (3˚C)
Viscosity at 104˚F (40˚C)	<10 cSt

Materials compatibility

Suitable

Metals:	Stainless steel
Plastics:	Polyethylene HD, polypropylene HD
Elastomers:	Nitrile buna N, PTFE, Viton® 75, HNBr

Not Suitable

Metals:	Mild steel

Safety and handling

Before handling, storage, or use, review the Safety Data Sheet (SDS) for guidance.
