

UNIK 5800/5900

Flameproof/Explosion-Proof Pressure **Sensing Platform**

The 5800 and 5900 are compact and rugged versions of the high performing UNIK 5000 pressure sensing platform. Both the 5800 and 5900 offer flameproof/explosion-proof or dust ignition protection by enclosure capability. They provide a lightweight and cost effective alternative to pressure gauges and switches in process, as well as, in oil and gas operations.

High Quality

With 35 years of pressure measurement experience, our field-proven Druck technology is at the heart of the new platform, resulting in a range of high quality, high stability pressure sensors.

Bespoke as Standard

Custom-built from standard components, manufacturing sensors to your requirement is fast and simple; each UNIK 5000 is a "bespoke" pressure sensing solution, but with the short lead times and competitive pricing you would expect from standard products.

Expertise

We have the people and the knowledge to support your needs for accurate and reliable product performance; our team of experts can help you make the right sensor selection, guiding you and providing the help and tools you need. It is important that you ensure that the sensor materials and performance selected are suitable for your application.

Supply and Outputs

Electronics Option	Description	Supply voltage (V)	Output	Current Consumption (mA)
0	mV Passive	2.5 to 12	10 mV/V^	<2 at 10 V
1	mV Linearised	7 to 12	10 mV/V^	<3
2	mA	7 to 28**	4-20 mA	<30
3	0 to 5 V 4-wire	7 to 16**	0 to 5 V	<3
4	0 to 5 V 3-wire	7 to 16**	0 to 5 V*	<3
5	Basic Configurable (3-wire)	See below~	See below	<3
6	0 to 10 V 4-wire	12 to 16**	0 to 10 V	<3

^ with a 10 volt supply mV output sensors give 100 mV over the full scale pressure. Output is ratiometric to the supply voltage.

Basic Configurable (Option 5)

Any pressure signal output configurations will be available, subject to the following limitations:

Output Specification	Basic Configurable (Option 5)
Minimum span:	4 V
Maximum span:	10 V
Maximum output limit:	11 V
Maximum zero offset:	Span / 2

Output voltage range can be specified to a resolution of 0.1 V Not true zero, the output will saturate at < 50 mV The output will continue to respond to 110% FS. i.e. if a 0 to 10 V output is specified, the output will continue to increase proportionally to applied pressure until at least 11 V.

Examples

Allowed	Not Allowed
0 to 5 V	1 to 4 V (span too small)
0.5 to 4.5 V	4 to 11 V (offset too big)
1 to 6 V	
1 to 11 V	

Supply Sensitivity

±0.005% FS/Volt (voltage and current version only)

Power-Up Time

• mV, voltage and current versions: 10 ms

Insulation Resistance/Isolation

- 500 Vdc; ≥ 100 MΩ
- 500 Vac: ≤ 5 mA leakage current (mV and mA versions only).

Shunt Calibration (5800 only)

Shunt calibration provides a customer accessible connection which, when applied, causes a shift in output of 80% FS in order to simulate applied pressure. It is fitted to the mV version as standard. Shunt calibration is activated by connecting Shunt Cal to -ve Supply.

^{*0} to 5 V 3-wire output is non true zero. At pressures below 1% of span the output will be fixed at approximately 50 mV

^{**32} V maximum for non-hazardous area operation

[~]Supply voltage is between [Maximum Output + 1V] (7 V minimum) to 16 V (32 V in non-hazardous area operation)
