

# Remote monitoring with JView Mobile™

## Introduction

The Baker Hughes Process & Pipeline Services' (PPS) JobMaster™ software is used to record treatments in the field. Data may then be transmitted to a central server using an available communications link. Treatment data can then be monitored remotely and in real-time from any PC, MAC, tablet, or smartphone with JView Mobile™.

## Features

- Provides remote access to field measurements, totals, and calculated values in real-time
- Enables operations to select and prioritize parameters for display, according to customer requirements

- Enables customers to view auto-scaled plots or to customize plot scales
- Hosts the data from a secure, widely-available server for 24/7/365 worldwide viewing
- Provides a simple link for authorized users to view the data from any web browser
- Allows many users to collaborate while viewing the data from different locations
- Users may connect to the real-time data for jobs in progress or replay the data post job

## PPS applications:

- Hydro testing
- Pneumatic testing
- Chemical cleaning
- Pigging or pig look trials
- Umbilical testing
- Accelerated cool downs/hot stripping
- Pipe freezing

Contact Baker Hughes or visit [bakerhughes.com](http://bakerhughes.com) to find out how our JobMaster and JView Mobile software can help you manage your data in real time, anywhere in the world.
