

Testing to the limits

Pressure is a vital parameter in motorsport; in the extreme conditions on vehicle and in testing, pressure sensors need to perform accurately and reliably.

Leading high performance motorsport teams have trusted Druck's pressure sensors for many years due to the unparalleled performance. With high accuracy and stability, the motorsport pressure sensor range is ideal for global the motorsport market. Druck offers a range of pressure and combined pressure/temperature sensors for race and test applications that meet the size, weight and material constraints required by elite motorsport teams. Our sensors are proven in a variety of applications, including: fuels, oils, coolants and hydraulic system pressures, in harsh environments with both high temperature and vibration levels.

All Druck sensors have gone through rigorous testing procedures to ensure accuracy and stability are maintained.

With an array of high-performance pressure calibrators and handheld indicators for in-house or track side testing and diagnostic use, it is time to consider Druck as your partner in motorsport.
