

System 1 Software

Datasheet

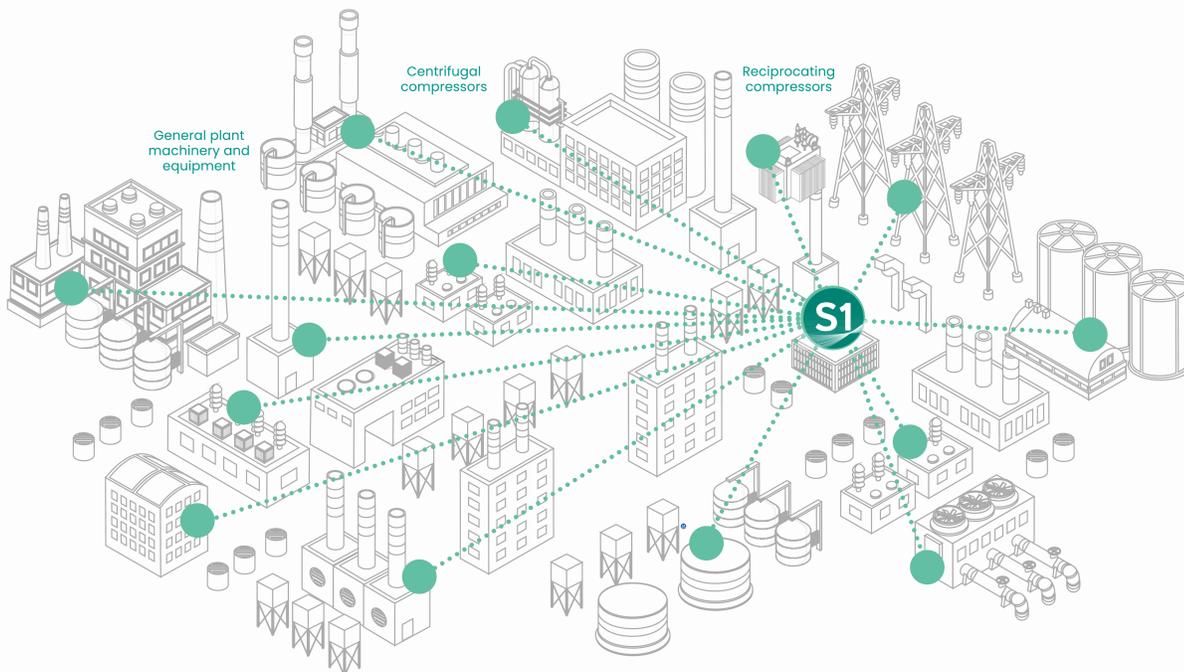

Bently Nevada Machinery Management

108M5214 Rev. AY

Offering plant-wide condition monitoring insights to reduce risk, increase productivity, and minimize unplanned downtime.

System 1 streamlines decision-making processes by bringing machine data into a single platform, providing clarity and context to your operations and enterprise. Harnessing the power of Bently Nevada's decades of machinery research and advanced diagnostics expertise, this powerful tool is a key component of successful digital transformation in any industrial facility. By combining its **Connectivity**, **Analytics**, and **Visualization** capabilities, System 1 is the premier Edge historian and condition monitoring platform among industrial operators.

System 1 brings it all together

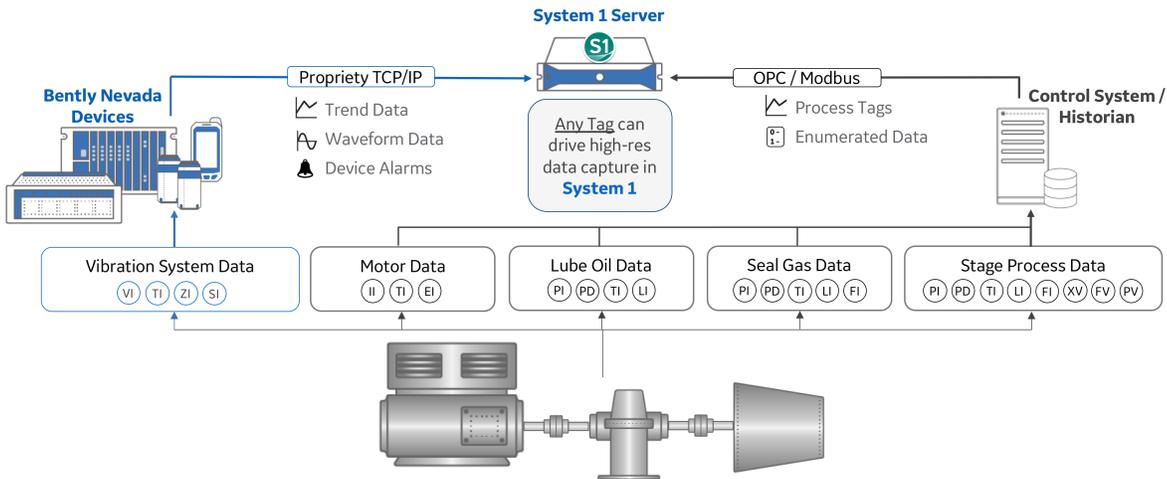

Bently Nevada has a rich heritage in helping customers solve industrial maintenance challenges that is over 60 years strong. Through user research in 25 countries with more than 500 end users, we have studied our customers' team dynamics, site processes, and technology suites to determine how System 1 can best support plant-wide machinery management. The resulting platform is the most comprehensive and user-intuitive condition monitoring solution ever developed.

Connectivity + Analytics + Visualization = A Complete Solution

Connectivity

System 1 connects to data sources on the Edge and collects high resolution vibration, process, and control system data. This data can be collected at up to once-per-second from a Bently Nevada Device, such as 3500 or Ranger Pro, from a Programmable Logic Controller (PLC), or from another Historian. In addition, an alarm on any tag mapped to a machine will trigger high-resolution data capture from all other tags, which includes 100ms static data from Bently Nevada’s 3500 and Orbit 60 Series devices.

Analytics

Within System 1, threshold alarms can be configured per machine operating state, with adjustable settings for time delay, latching, and suppression. Four levels of alarm setpoints can be configured per measurement, regardless of the source of the data (e.g., Bently Device, OPC, Modbus). Decision Support extends the analytic capabilities of System 1, enabling users to build custom rules for deeper insights into the behavior of their machines and enhanced knowledge across plants or entire enterprises. Bently Performance further expands analytic capabilities within System 1 by offering online thermodynamic performance monitoring.

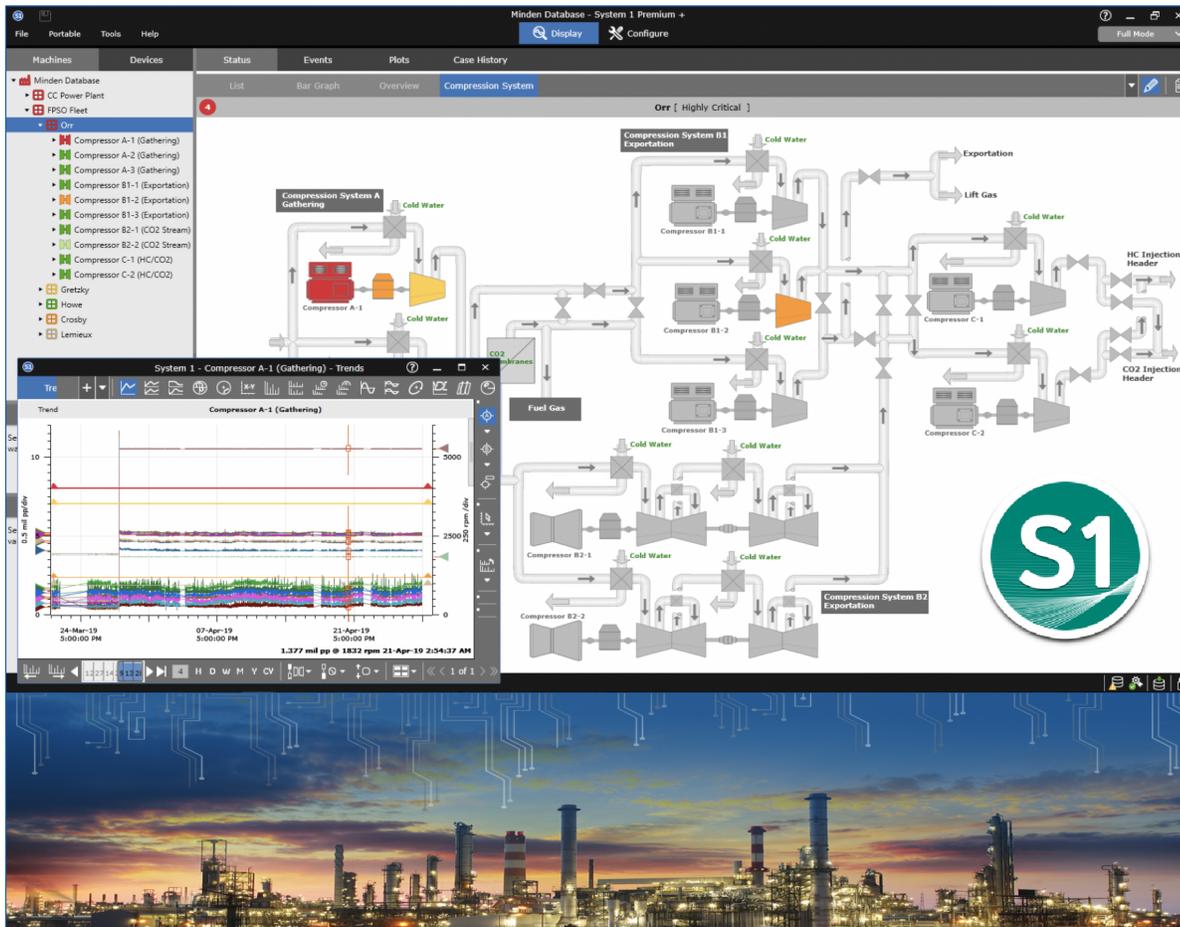

Decision Support

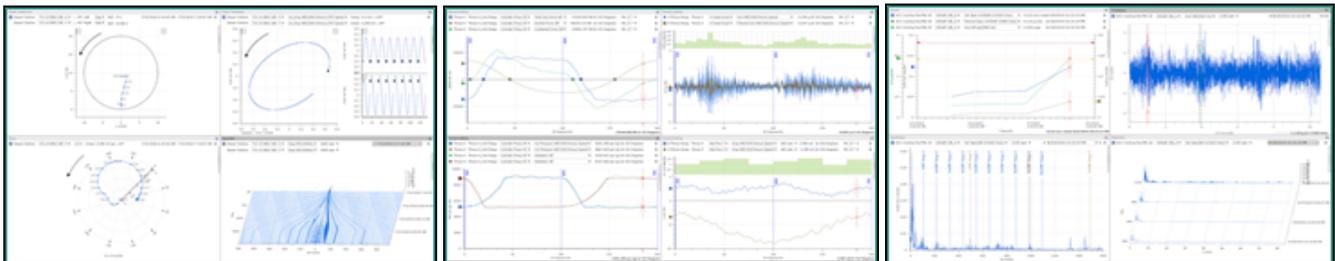

Bently Performance

Visualization

Post collection and analysis, System 1 provides best-in-class visualization tools. The HMI builder allows users to graphically represent their entire Plant System using the built-in symbol library. The HMI view graphically depicts operational health, allowing users to focus on their high priority assets. Collected data can be viewed and manipulated within the plotting workspace, enabling users to diagnose machinery health issues. With a multitude of plot types and tools, users can quickly identify abnormalities and assess their impact on the smooth operation of their facility.

General Capabilities

Distributed Client/Server Deployment

- TCP/IP Client to Server Communication (Ports 7550 and 7551)
- Clients can connect to five different condition monitoring databases simultaneously on a server.
- A single Server 1 server can support online data collection for up to 5 databases.
- System performance tested with 5 simultaneous client connections to one online database.

Data Replication

- Access System 1 on the business network by replicating data across a data diode or firewall.
- Reduce Cyber Security risks to an acceptable level.

User Security Roles

- Leverages Windows Domain and local accounts
- Administrator Role (Read, Write, Database Management)
- Advanced Role (Read, Write)
- Basic Role (Read Only)
- Users with the Edit Settings right can modify the settings for the Advanced and Basic roles.
- Users with server administrator privileges can add new user-defined roles.

Database and Server Capacity

- System 1 Server can run five online condition monitoring databases.
- The System 1 Server can contain multiple portable databases in addition to the online databases.
- Each condition monitoring database can contain a maximum of 5000 pieces of equipment. (Motor + Pump = 2)
- Embedded PostgreSQL for data storage and management
- Edit Trend, Alarm, and Transient Data Store sizes and monitor health over time to avoid losing data. Available only for online data.

Display Unit Preferences

Effortlessly switch between As Configured, Imperial, and SI unit systems from Display.

System Specifications and Recommendations

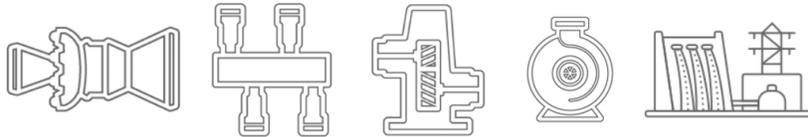

Standard Server	<p>Racks: Dual Intel Xeon 4208 8-core, 2.1GHz Processors, 16 cores total, 32 logical processors</p> <p>Towers: Dual Intel Xeon 4210 10-core, 2.2GHz Processors, 20 cores total, 40 logical processors</p> <p>64 GB RAM or above Operating System Hard Disk: RAID 1 & 300 GB - 10000 RPM Historian Hard Disk: RAID 6 - 10,000 RPM DVD-RW</p>
Light Server	<p>Rack: Single Intel Xeon 4208 8-core, 2.1GHz Processors, 8 cores total, 16 logical processors</p> <p>Tower: Single Intel Xeon 4210 10-core, 2.2GHz Processors, 10 cores total, 20 logical processors</p> <p>16 GB RAM or above Operating System Hard Disk: RAID 1 & 300 GB - 10,000 RPM Historian Hard Disk: RAID 6 & 1.2 TB- 10,000 RPM DVD-RW</p>
Workstation	<p>Intel Xeon W-2123 (3.6 GHz Processor)</p> <p>16 GB RAM or above 1 GB Graphics Card 1 TB Hard Drive - 7200 RPM DVD-RW</p>
Laptop	<p>i7 - 8850H (2.6 GHz Processor) 6 cores</p> <p>16 GB RAM or above HD Graphics Card 512GB Solid State Drive DVD-RW</p>

Network speed	<p>Minimum 100 Mbps recommended</p>
Supported Operating Systems	<p>Microsoft Windows® 2025 Server Standard Edition 64 bit Microsoft Windows® 2022 Server Standard Edition 64 bit Microsoft Windows® 2019 Server Standard Edition 64 bit Microsoft Windows® 2016 Server Standard Edition 64 bit</p> <p>Microsoft Windows® 11 Pro 64 bit (23H2, 24H2)[†] Microsoft Windows® 10 Pro 64 bit (22H2)[†]</p> <p>† Recommended for Client</p>

System 1 Ordering

Package Types

System 1 can be ordered in three different package types:

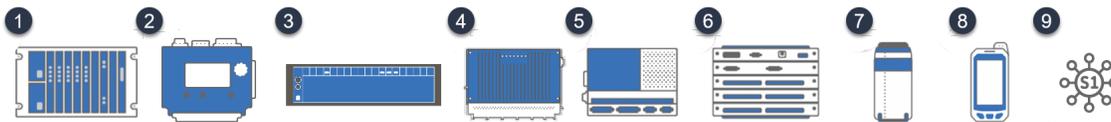

Asset-Based: Order by condition monitoring criticality and quantity of assets.

Industry-Based: Order by application industry and size. Includes unlimited data import across all devices.

Device-Based: Order by type and quantity of devices.

- 1 = 3500
- 2 = 2300
- 3 = Orbit 60
- 4 = Orbit DCM
- 5 = vbOnline Pro
- 6 = TrendMaster
- 7 = RangerPro
- 8 = SCOUT
- 9 = Process Data Import/Export (Examples: OPC DA/UA, MODBUS)

License Types

All System 1 Packages can be ordered as Perpetual or Subscription. While System 1 functionality is identical for both license types, key structural differences exist:

Perpetual Type

- Upfront Capex investment (One-time License).
- Must purchase M&S for technical support and software updates (smaller year-over-year investment via OPEX).
- License itself does not expire. Technical support and software updates cease without M&S coverage.
- License tied to generation of software platform for which perpetual license acquired (life cycle documented by vendor's).

Subscription Type

- No upfront Capex investment (year-over-year subscription via OPEX).
- Subscription license fee includes Maintenance and Support (M&S) at no extra fee.
- License expires after 30 days grace period if not renewed.
- License is not tied to a product generation/lifecycle i.e. annual subscription updates provide license entitlement to vendor’s next-gen platform.

Additional Information

What is a System 1 Display Client?

A System 1 Display Client can connect to the System 1 Server residing locally on the same computer or remotely via network access. Local clients can have full access to the condition monitoring database. Remote clients can connect to a condition monitoring database only when direct or networked access to the server is available.

What is a System 1 Server?

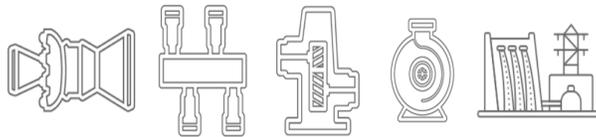

A System 1 Server may contain one or more condition monitoring databases accessible from one or more Display Clients. Historical data and configuration structure reside on the server. Hence, the databases are always available.

What are + packages?

When ordering by device, a base package must be selected. Select the System 1 Premium+ and Advanced+ packages to use portable data collectors in addition to online devices.

Package	Online Continuous CM	Scanning & Process CM	Portable CM
Premium+	✓	✓	✓
Premium	✓	✓	
Advanced+		✓	✓
Advanced		✓	
Fundamental			✓

Asset-Based Packages

Asset-Based Packages are ordered by condition monitoring asset criticality and quantity, with four asset categories:

Category A Assets

- High criticality assets
- Dedicated online continuous monitoring & protection

Category B Assets

- Essential Assets
- Dedicated online-periodic monitoring or shared continuous monitoring & protection

Category C Assets

- Low Criticality Assets
- Online periodic monitoring only or distributed protection & monitoring

Category D Assets

- Balance of Plant
- Offline periodic monitoring using portable devices

Package	Online Continuous Monitoring & Protection ¹	Shared Monitoring & Protection or Dedicated Scanning & Process CM ²	Shared Scanning CM or dedicated distributed solution ³	Offline Portable ⁴	Replication	Static Data Import/Export	Modbus Import	Waveform Export
Asset A	✓	✓	✓	✓				
Asset B		✓	✓	✓				
Asset C			✓	✓				
Asset D				✓				
CMS Core						✓	✓	

1 Dedicated 3500 rack

2 Typically shared 3500 rack or dedicated Orbit DCM/vbOnline Pro/TrendMaster

3 Typically 2300/1900/Ranger Pro or shared Orbit DCM/vbOnline Pro/TrendMaster

4 SCOUT and vbX Series portables for offline periodic monitoring

		D: Plant Output (MW) - Not Fleet or Multi-Site	
		##	Numeric Entry [0 - 30,000 MW]
		E: Quantity of Plant Server Licenses	
		##	Numeric Entry [1 - 25]

Note: It is not acceptable to use this license for multiple sites or an entire fleet.

Wind Generation Industrial Package

Wind Generation Industrial Package			
Perpetual		Subscription	
3071/84 System 1 for Wind Generation		3072/84 System 1 for Wind Generation	
A: Plant Output (MW)		A: Purchase Type	
##	Numeric Entry [7 - 1000 MW]	01	New (first time purchase)
		02	Renewal
B: Quantity of Server Licenses		03	Expansion
##	Numeric Entry [1 - 25]	B: Term (Subscription Term in Months)	
C: License Type		##	Numeric Entry (1 - 60 Months) Note: New and Renewal orders should be made in 12-month increments.
01	TX	C: MW Output of Wind Farm	
02	RX	##	Numeric Entry [7- 1000 MW]
		D: Quantity of Server Licenses	
		##	Numeric Entry [1 - 25]
		C: License Type	
		01	TX
		02	RX

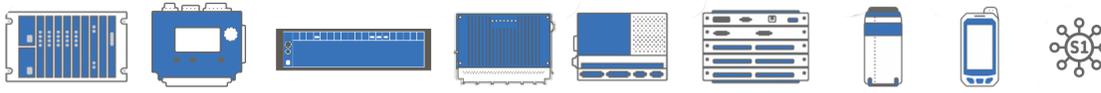

It is acceptable to license multiple sites or an entire fleet using this part number, as long as an active M&S is in place or all of the sites or the entire fleet.

This package includes data import for up to 200 vbOnline Pro devices. Separate device import licenses are not required.

Device-Based Packages

Device-Based Packages are ordered by base package, device type, and quantity. Base packages are:

System 1 Premium

Provides connectivity to all of Bently Nevada’s online devices, as well as process data sources. Select the System 1 Premium+ option to add support for portable data collectors.

System 1 Advanced

Provides connectivity to Bently Nevada’s scanning and wireless devices, as well as process data sources. Select the System 1 Advanced+ option to add support for portable data collectors.

System 1 Fundamental

Provides connectivity to Bently Nevada’s portable data collectors.

Qty #	1 - n	Qty #	1 - n
	<ul style="list-style-type: none"> Static tags - 1 second interval or at device rate. 		
D: OPC UA Server Export - Alarm Events (1 per server)		F: OPC UA Server Export - Alarm Events	
Qty #	1 - n	Qty #	1 - n
	<ul style="list-style-type: none"> Events - exported as soon as new alarm events are logged in System 1. 		

It is recommended to meet the standard server specification for performing OPC UA export from five online portable databases on a single System 1 Server.

Database Replication

Database Replication	
Perpetual	Subscription
3071/16 System 1 Replication	3072/16 System 1 Replication
A: Tx Server(s) (Total SW License Price of Tx Server)	
##	Numeric entry (in local currency)
	<ul style="list-style-type: none"> • Conduit to move data to the business network • Contains config info and connection to devices
B: Rx Server(s)	
Qty #	1 - 8
	<ul style="list-style-type: none"> • Database mirroring S1 server on Plant Network • Supports 80-90% of condition monitoring tasks

To order System 1 Replication via Subscription, reference the Cordant 3073/16 Portfolio.

Contact your Bently Nevada Sales Representative for more information.

A standard server specification can support one to five replications. For six to eight replications, it is recommended to have SSD on the Rx server.

Decision Support and Decision Support Analytics work only with databases using PostgreSQL. Decision Support applied to a targeted Rx server will support a maximum of 8 Rx replicated databases with a maximum of 10,000 results per database. Results may come from Decision Support analytics and / or custom analytics.

Software Maintenance and Support (M&S)

System 1 Maintenance and Support (M&S) provides access to the latest platform upgrades through a simplified web portal interface.

- 24/7 technical support (regional specialists)
- Access to the latest software releases
 - Operating system updates
 - Cyber security patches
 - User-driven feature additions

Maintenance and Support
