

SlimX liner hanger

Applications

- High load capacity needed
- Low annular clearance
- High Pressure

Features and benefits

Hanging capacity, tensile ratings, burst, collapse, flow area, and cone outside diameters are all data points that are specific to the liner/casing size and grade of material used

The Baker Hughes **SlimX Liner Hanger** is a hydraulic set, robust, solid body hanger best suited for applications where high load capacity is required with minimal annular clearance.

The short length of the SlimX also makes it the ideal choice when equivalent circulating density (ECD) is a concern.

The SlimX incorporates the patented FLEX-LOCK slip and slip seat design which maximizes liner weight capacity. By distributing the load circumferentially around the tool, the SlimX prevents collapse loading of the mandrel.

Ask your Baker Hughes representative how the SlimX may be right for your next high load capacity.

Available Sizes	
Liner Hanger (body) Size (in.)	Casing Size (in.)
7.625	9.625
8.625	12.250
9.625	11.750
10.750	13.375
