**Bently Nevada** 

a Baker Hughes business

# Utilizing data for a better future

Get smarter insights from your data with Bently Nevada's asset condition monitoring solutions.

### Mining

With extreme fluctuations in the market today, uptime and operational efficiency are critical to ensuring the long-term, sustainable success of your mining operations. Implementing a tailored condition monitoring program can offer significant value by realizing the potential of your data to create insights that lead to better decisions to reach your goals.

### Why choose Bently Nevada?

Our solutions enable improved uptime and efficiency for the mining industry with:

Smarter insights from better data.

The power of predictive maintenance.

Condition monitoring expertise.

# 60+ years

of condition monitoring experience with high-risk customer operations in oil and gas, power generation and other industries.

# 6,000,000

Sensor monitoring points installed globally, providing valuable data. Our solutions collect and provide insights from that data, enabling better decision-making.

# 160+

Expert machinery diagnostic engineers worldwide, supporting customers' condition monitoring programs with onsite and remote diagnostic capabilities.

### Modern mining challenges

# **IMM TB**

(terabytes) of data is generated per minute across the industry from drills, trucks, processing plants and other equipment.<sup>1</sup>

# **<**1%

of data from mining equipment is utilized. Even with such vast amounts of data being collected, its potential to provide useful insights is largely unrealized.<sup>1</sup>

# 28% less

productive compared to a decade ago. Global productivity has declined 3.5 percent each year, emphasizing the need for this industry to become more efficient.<sup>2</sup>

#### A Bently Nevada solution gives you:

- Reliable data acquisition, at the right time, and at the right frequency with repeatability and accuracy
- Analytics and Dashboards to provide role based visibility to your workforce for effective decision making
- Historical and real time asset condition data for efficient decision making
- Condition monitoring for all type of machines: low speed, complex gearboxes, variable load, movement and underground equipment
- Flexible architecture with centralized, distributed and wireless solutions to get you the data you need for best in class condition based maintenance

# Changing the industry with plantwide connected technology

Connecting machines, data and people across your operation for better outcomes.

#### Intelligent machines

Advanced technology sensors capture valuable data from your machines in real time and offer asset condition monitoring and early warning detection enabling smart and informed maintenance decisions.

#### **Advanced analytics**

Software with embedded knowledge connects your data to offer the analytics and insights you need for better decision-making.

### ) People at work

Flexible, easy-to-use, intuitive interfaces allow for easier training and greater labor productivity in your operations.

### Our products and services

#### **SCOUT200 series**

**Easily collect data.** An advanced portable vibration data collector that measures and collects vibration data from your assets, utilizing smartphone technology.

#### vbOnline Pro

Monitor your asset health. A mounted monitor that measures vibration data and categorizes it by machine operating state.

#### 2300 vibration monitor series

**Protect and monitor your assets.** A two-channel vibration monitor with speed or a process parameter to monitor asset condition that provides automatic warning or shutdown relays.

#### Orbit 60 Series machinery monitoring system

Built on a fully distributable architecture that allows you to monitor all your assets regardless of complexity or location and is intrinsically cyber secure. Orbit 60 is the future of machinery condition monitoring

#### System 1

**Gain unparalleled operational clarity and context** System 1 offers plant-wide condition monitoring insights to reduce risk, increase productivity, and minimize unplanned downtime. The platform lays the foundation for modernized operations by unifying machine data into a single platform.

#### Best-in-class service and support

To ensure our customers get the greatest value from our product solutions, we offer a complete range of service and support options to strengthen your condition monitoring program.
