# Inspections Made Simple

for MROs

InspectionWorks is a nondestructive testing (NDT) software platform designed to simplify and standardize aircraft maintenance inspections, without sacrificing quality. It streamlines inspection processes, standardizes reports, improves collaboration across key stakeholders, and much more.

And the best part is, it seamlessly integrates with MViQ(+) and Mentor Flex borescopes.

Standardize your Inspections
Borescope inspection templates ensure that all inspections are done the way you want them, every time.

Digitize your Inspection Process
Data gathered from your MVIQ+ can automatically populate InspectionsWorks. Then, generate reports with the click of a button.

Collaborate with Key Stakeholders
Collect inspection data for the entire maintenance process. Share data securely not only with your direct team, but also with asset owners and engine manufactures.

Centralize your Inspection Data
Bring all your inspection data into one unified platform. View and compare detailed inspection information on incoming and outgoing inspections.

How it Works

Start with an MDI
Create a Menu Directed Inspection (MDI) to templatize your inspection process and launch it on your borescope.

Capture & Analyze Data
Gather data and analyze with Real3D Measurement and AI. Automatically upload with Push2IW.

Store, Search, Measure & Share
All your inspection data is at your fingertips. Collaborate and share with key stakeholders.

Report
Automatically generate reports based on your MDI. Share those reports with asset owners & engine manufacturers.
