

Four solutions that are energizing change and increasing efficiency

SWIPE TO READ >

TRU-ARMS™

advanced reservoir
mapping services

- Maximizes production and recovery potential with optimized well placement
- Improves reservoir architecture mapping
- Optimizes field development
- Enhances volume estimates
- Designs better completions

InvictaSet™

self-regenerating
cement system

- Effectively regenerates itself when in contact with hydrocarbon or water via a pioneering crystalline growth process
- Prevents flow through cement matrix, induced cracks, or microannuli
- Reduces risk of sustained casing pressure
- Activates in as little as 24 hours

Flora™

automated connection
integrity service

- Automation ensures faster equipment workflows
- Reduces footprint, people on board (POB), and operational emissions
- Enables real-time decision making with remote data transfer
- Detects faulty connections and torque-turn events

Leucipa™

automated field
production solution

- Automates field production
- Efficiency gains reduce emissions and operation risks
- Analyzes multiple wells through a single interface
- Delivers actionable recommendations tailored to an operator's respective field priorities
- Deploys with any system and is agnostic to OEMs
