

Benefits of CT inspection

Non-destructive battery testing, such as CT inspection, lets you go beyond traditional methods of testing to help reduce costly failures. See how CT inspection can help you stay ahead of the curve and ride this surge of upward growth.

More efficient

Inspect different types/sizes of batteries and defects on the same line

Reduce changeover time/personnel to move large batteries for inspections

Better visibility for defects

Easily detect anomalies present in battery components, battery cells, and ESS & EV modules

Inspect known sources of defects and gain insights into new areas of possible concern

Deeper insights

Identify new failure modes and implement critical process improvements

Meet and exceed regulatory compliance mandates

Gain more confidence in product integrity (avoiding costly recalls)
